KEY ACHIEVEMENTS

- Built and shipped a company-wide data & AI platform solo in under six months; promoted to Director of AI
- Entire C-suite, directors, and managers use the platform daily in place of the ERP (20+ daily users)
- ≈2 hours per day returned to each active user via automation and self-service tools
- Sales tie to month-end close within 0.04%; scrap costing matched to the penny
- Daily and weekly executive reporting fully automated, with AI-drafted narrative
- P&L analysis for \$20M+ monthly revenue; \$30M CAPEX prioritization (NPV/IRR)
- AI usage costs under \$800/month with per-user caps and audit logging

EDUCATION

M.S. in Analytics, Georgia Institute of Technology ('29)

M.S. in Business Analytics, Cornell SC Johnson College of Business ('26)

B.A. Economics & Statistics, University of Vermont ('21)

SKILLS

AI & Cloud

Azure (Data Factory, SQL, Entra, Key Vault) · LLM applications & MCP connectors · AI workflow automation · CI/CD

Data & Engineering

SQL · Python · TypeScript / Next.js · R · Power BI · Tableau

ERP & Finance Systems

SAP FICO · IBM TM1 · E2 · M1 · Crystal Reports

WORK EXPERIENCE

Director of AI

The Rubber Group

Laconia, NH | 2026 – Present | PE-backed manufacturer, 4 plants, 2 ERPs

- Architected and shipped a company-wide data & AI platform in under six months, working solo with AI leverage: 124 Azure Data Factory pipelines across three integration runtimes unifying two ERPs, a CRM, and the general ledger into an Azure SQL warehouse (244 tables, 7.9M rows), plus a from-scratch Next.js application behind Microsoft Entra SSO.
- Reverse-engineered undocumented ERP and Crystal Reports formulas and reconciled every metric to the books before launch: sales tie to the month-end close within 0.04%, and scrap costing matched to the penny.
- Drove adoption from zero to the entire executive team: C-suite, directors, and managers work from the platform daily instead of the ERP, with roughly two hours per day returned to each active user.
- Automated the daily sales flash and the weekly investor summary end to end: both write and send themselves, with AI-drafted narrative generated from validated data.
- Built the secured AI layer: plain-English Q&A over governed metrics and a custom MCP server with fail-closed Entra authentication, per-user rate caps, spend ceilings, and full audit logging.
- Shipped 17 production modules behind 63 API routes, replacing manual ERP rituals: quoting & pricing, validated scrap costing, capacity, mold reports, a live ops board with audited safety logging, per-operator performance, and close automation.
- Partner directly with executives, private equity stakeholders, and plant leadership on the AI roadmap; platform now under evaluation for deployment at additional portfolio companies.

Strategic & Business Advisor — FinOps / Analytics Tooling

Politheon (Georgia Tech CreateX Startup)

Atlanta, GA | 2025 – Present

- Partner with founders and engineering to define FinOps strategy for AI infrastructure, aligning Azure/GPU consumption with budget, margin, and growth targets.
- Built cost-visibility dashboards and unit-economics models (workload / feature / customer segment) that translate usage into pricing, ROI, and roadmap tradeoffs.
- Implemented tagging standards, budget guardrails, and right-sizing recommendations to improve cost attribution and governance while maintaining model performance.
- Supported product and growth strategy contributing to recognition as #2 featured startup at the Georgia Tech CreateX showcase.
